# GALLIMIMUS

**SPECIES NUMBER: GA-22779**

**FAMILY: ORNIHOMIMIDAE**

**DIET: OMNIVORE**

**HEIGHT: 7 FT**

**WEIGHT: 950 LBS**

**LENGTH: 20 FT**

**ANIMAL DESCRIPTION:** Gallimimus are completely toothless omnivores that usually hunt in the early morning when their prey (insects or small fauna) are not on alert. Gallimimus can reach speeds up to 80 mph in the open plains. They are social, intra and interspecifically. They generally herd with the larger herbivores for a better protection against predators, with speed being their main defense against them.

**ANIMAL LOCATION:** Gallimimus are mostly found on the open plains with the other herbivore dinosaurs. They are usually found in the outer limits of the La Pradera, Palo Blanco and Sierra San Fernando plain's forests. Tagging of these animals can be done easily from a vehicle. Never on foot, as they can easily outrun a man.
